

From Grocery Store to Public Library

The building which was originally built as a grocery store in 1978 became the home of the new Cabot Public Library, Cabot, AR, in 2016. The 24,026 square foot building was completely renovated under the direction of Schelle-Architect of Cabot, AR.

Capri Collections is pleased to be a part of this great transformation with our Eco-Clicks Cork floating floor. According to Project Architect Jerrie Ott, the slab was rough, wavy and pitted so floating floor was the logical flooring option. With methodical attention by the architects and installers to proper placement of expansion joints and transitions, the floor is able to successfully “float” as intended, even with the weight of heavy book shelving.

“The warm wood tones that the natural cork provides created the welcoming environment we wanted for the library. With a variety of activities, including story time, art and crafts and community meetings, hundreds of people walk on the cork floors every day”, stated Jerrie Ott. “The floors look beautiful and are easy to maintain. The cork added a design element while also offering the floating option needed for the substrate issues.”

Over 16,000 square feet of Eco-Clicks Cork colors Rugged and Chestnut are installed at the Cabot Public Library.
